10% discount for the G2V0407 Needle
Dispensing Machine.

Conditions apply- contact us for more
information.

At the 26th Harm Reduction International
Conference (HR19), held in Porto, Portugal from 28
April to 1 May 2019:

Describing client presentations at syringe dispensing machines in Melbourne, Australia: A novel method of data capture

Reece Cossar, Daniel O'Keefe, David Jacka, Paul
Dietze

*Our results show that recorded client profiles
differ between dispensing modality whereby
SDM's may provide better NSP access for
women, gender minorities and young PWID.
Our findings demonstrate that SDMs do not
only provide an alternate means of accessing
sterile needles and syringes, particularly
outside of fixed-site NSP operating hours, but
they may also provide improved NSP access
for key PWID sub-groups.*

Data Capture

NSP's currently
using our SDU's
data capture are
utilising this
information for
easy reporting
and future
planning of
infrastructure.

Protection Cages

If vandalism is a
concern we have a
Vandal Protection
Frame. That helps
the machine with
stand kicking and
other forceful
behaviour.
