

# NDU NEWSLETTER

MARCH 2020

**PROVIDING SYRINGES WITH  
NO PERSON TO PERSON  
CONTACT  
**24/7**  
**365 DAYS A YEAR****

## ***No Person to Person Contact***

NDU's allow distribution of needles with no contact between people.

This allows NSP's to be 24 hour a day including public holidays to provide needle distribution.

NO TOUCH  
Needle Dispensing Units?**

## ***Designing new features***

As we are a design and manufacturing company we continually striving to develop our machines to keep up with the ever changing demands and new technology.

**We would  
appreciate your  
feedback**

Do you feel it would be beneficial to have NDU's that initiate dispensing of items by sensor rather than touch?

Please call us to discuss or reply to this email.

## ***NO TOUCH NDU'S***

Given what is happening in today's society it is making everyone more concerned about germs and how they are transmitted.

Add to that the information that the coronavirus can remain on surfaces for up to 3 days it is making everyone concerned about touching communally used handles and buttons.

Due to these concerns our technical design team are looking at how to implement 'no touch' vending. This will allow people using our NDU's to make selections and have their required items dispensed without touching button's or any part of the machine. We will keep you updated on development's but would appreciate your feedback on this possible new design feature.

## **AUSTRALIAN OWNED**

We are an Australian owned and managed business. Our staff have over 40 years combined Vending Machine experience.
